# STOCKING SERVICES

## SIMPLE, ECONOMIC PROJECT DESIGN & INSTALLATION

In 2019, RPCS began offering customers a stocking services option with the opening of two locations in California and Texas, an endeavor that allowed RPCS to control its pipeline and provide unique advantages to its customers. Bringing stocking operations in-house allows RPCS to offer added levels of predictability, efficiency, and reliability to your business operations and project pipeline.

With the ability to control the delivery schedule and material accuracy, RPCS eliminates schedule impacts as well as overall inefficiencies. Having a large stock of components allows RPCS to quote, engineer, and deliver orders quickly, drastically reducing onsite quantity discrepancies.

## WITH RPCS'S STOCKING SERVICES, CUSTOMERS CAN EXPECT:

- ADDED LEVELS OF PREDICTABILITY, EFFICIENCY & RELIABILITY
- FASTER QUOTING & ENGINEERING
- MATERIAL ACCURACY WITH RPCS'S ROBUST INVENTORY SYSTEM
- CONTROLLED DELIVERY SCHEDULES
- OPTIMIZED FIELD DELIVERY

We have a single focus on aspiring to be the easiest, most accurate, quickest source for ground mount systems as a trusted subcontractor partner. Having a large stock of components allows us to quote, engineer, and deliver orders quickly, allowing us to control the delivery schedule and drastically reduce onsite quantity discrepancies. What's more, we can optimize our field delivery methods to simplify the receiving and increase the speed of the field installation to be as efficient and predictable as possible.
