

Turnkey solar trackers and electrical goods for **electric utilities**

Simplifying utility solar power procurement

Electric cooperatives and public utilities aren't strangers to complex infrastructure projects. As owner-operators, you have an in-depth understanding of what you need to make your pipeline of solar projects—like your other assets—successful in the long term.

When you choose Ampacity as your partner for single-axis solar tracker procurement, installation, and commissioning—and electrical goods supply—you get expert assistance and specialized support every step of the way.

Ampacity has contracted with utilities to deliver nearly 730 megawatts of turnkey single-axis solar trackers across 137 projects in 15 states, in addition to its business with developers and EPCs. This direct approach not only avoids redundant markups and layered communication, but simplifies your supply chain and gives you more visibility into the structural goods, build quality, scheduling, and safety practices on your site.

Partnering with Ampacity directly results in a simpler, more cost-effective path to delivering on your solar goals.

“

Ampacity has been an excellent partner on our solar park projects. Their design capabilities, installation expertise for the tracker systems, and ability to meet our tight construction schedules has made a very positive impact on our projects.”
